

# Chain-It Tight™

The new long term tire chain tightening accessory.

## Operating Instructions

Thank you for purchasing **CHAIN-IT TIGHT™** Long Term Tire Chain Tightening Accessory. To properly use this device please perform the following steps.

1. Install tire chains as instructed from Manufacturer.
2. Hook back of the chains so they wont pull over tire while tightening with **CHAIN-IT TIGHT™**
3. Hook front of tire chain so chains are snug (Note: If your chains have cambers, close them at this time)
4. Attach **CHAIN-IT TIGHT™** to tire chain by passing "S" hooks equally around the chain.
5. At this time, take the spool and attach any where on cable (by using the slot in back) and tighten cable around spool (either direction) with 3/8" ratchet that's included. (Tighten until chains are tight around tire.)
6. Place cable Stop Pins behind cable to prevent the cable from unwinding.

**Note:** Remember tires are made to flex, so do not over tighten your tire chains. Tighten your tire chains so the cross members are tight across tires.
